Nordica 100 Bifacciale

Double Sided

The inserts LA NORDICA-EXTRAFLAME have been studied under the banner of the maximum adaptability. The particular shape, the disappearing smoke outlet and the version H.49 allow the inserts to be fitted into mostly of the already existent fireplaces. The ventilation available in all the versions allow to reach in a very short time the desired temperature. The glass window, available in 3 different models, allow, with absolute safety, to enjoy the view of the crackling fire.
