## INSTALLATION INSTRUCTIONS

The Flameline Drop-In Fireplace is designed to drop into a hole cut out of a surface (e.g. a kitchen work surface).

The hole in the surface needs to be made in a non-combustible material (e.g. cement), with the appropriate amount of cross flowing ventilation available into the box housing the Drop-In Fireplace, as depicted below.

The Chad-O-Chef - Drop-In Fireplace requires sufficient Ventilation in order to function correctly. Inadequate oxygen supply to the unit will affect the clean burning nature of the fireplace and further, cause the ODS safety System to cut out the gas supply to the unit completely.
