

A NEW GENERATION IN HEATING

INTRODUCTION TO OUR BRAAI RANGE

BRAAI & EXTRACTION SYSTEMS FOR THE HOME ENTERTAINER

Infiniti Fires™ is a premium manufacturer and distributor of:

- Built In and Portable Braais burning wood/charcoal or gas
- Gas Grills
- Wood Burning Stoves
- Flue-less Gas Fireplaces
- Smoke Extraction Systems
- LP Gas Bottle Cages

With over 3 decades of experience in this industry, plus the acquisition of the Firefox and Multi-Braai brands/knowledge, our reputation to produce units that look good, perform well and stand the test of time is well established.

Through long established relationships with shops that sell and install our products, we are well placed to hear the needs of our clients and to continually look at ways to improve our product range to incorporate these needs into our ranges.

The Infiniti Fires Team is single minded in their quest to produce products that are easy to use, stylish, highly efficient in their use of energy and built to last.

Spares for our units are mostly locally made and readily available should you need a spare part in the future.

Our service department often receives gas grills coming in for a service made over 30 years ago. These Grills receive replacement parts where needed, as well as a thorough clean up to remove accumulated grime and get the unit ready to perform well for the next decade. Not many gas grills sold in South Africa will survive a decade of use, let alone 3 decades.

Whatever your braai, smoke extraction or home heating requirements, we are confident you will find the ideal solution in our product ranges. We look forward to being of service to you and hope you will join the many thousands of satisfied clients who have purchased from us since our inception.

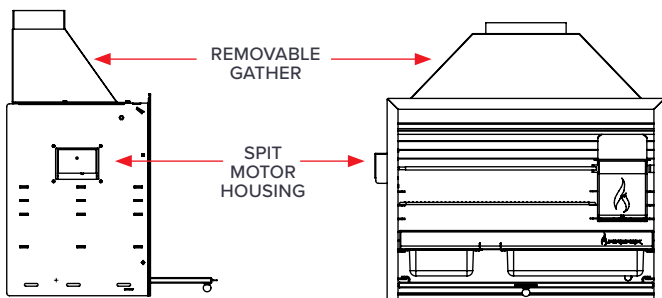

ITEMS COMMON TO ALL OUR BUILT IN BRAAIS

REMOVABLE GATHER/FLUE OUTLET

Our flue gather is not welded to the braai body, but is attached with nuts and bolts. This assists installation into an existing brick built chimney, where there is an opening that the braai box can slide into. You have the option to fit the gather and a flue system or use the brick chimney if it is suitable.

Our gathers are available with either a rectangular or circular outlet, giving you the choice of which flue shape you wish to use.

SPIT MOTOR HOUSING

All our built in braais are equipped with a removable spit motor housing, allowing you to choose if you want to fit it or not.

A 220 v motor, spit and skewers or one of our spit basket options can be purchased as an optional extra. Our Combo braais are equipped with a spit motor housing on both the charcoal and gas cooking sides.

LIGHT FITTING

All our built in braais come complete with a light fitting, to enable you to see the meat cooking when braaing in the dark. Our Combo Braais come with a light fitting on both the charcoal and gas sides.

FOLD DOWN & SLIDE IN DOOR

All our built in braais now have single doors that fold down and slide in, to provide a solid work table to hold your meat platter, condiments and cooking utensils.

The door in the work table position allows easy access to cooking meat at the rear of the braai. A huge improvement over double door systems that put some strain on back muscles leaning over the table into the braai.

DOOR CLOSED

DOOR OPEN

EASE OF TRANSPORTATION

If you are taking one of our braais as a charcoal unit, with the fold down and slide in door, it comes conveniently packaged into a sturdy cardboard box for transport to you wherever you are in the country. If you are taking one of our gas grills as part of this built in braai, the grill will come packaged in a separate box to protect it better in transport and whilst waiting on site for the braai body to be built in.

INSULATION MATERIAL/PAINT

Our built in braais are supplied with adequate insulation to wrap the braai with, prior to building it into the brickwork. This will enable the braai to expand with heat, without damage to either the braai or the brickwork.

An aerosol tin of paint is included to touch the paint up on the braai once installed.

EASY SLIDE EMBER MAKERS

Our ember makers not only enable a continuous supply of hot coals for uninterrupted cooking but also easy movement of the hot coals out of the ember maker onto the ember tray.

EMBER TRAY

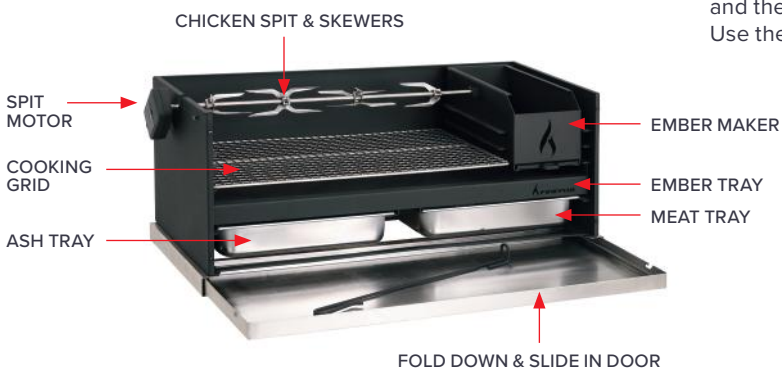

Our ember tray has a heat deflector plate located between the hot embers and the meat tray, to reduce heat in the meat tray and minimise further cooking of already cooked meat. The ember tray includes an ash hole in the tray for easy cleaning.

STAINLESS STEEL GRID

Standard on all our braais.

STAINLESS STEEL MEAT & ASH TRAYS

These rather classy 304 St St trays are standard on all our charcoal/wood braais. Use one to keep your cooked meat warm and then carry it through to the table to your hungry guests. Use the other to easily remove ash from the ember tray.

CHOOSING THE PERFECT BRAAI FOR YOUR LIFESTYLE

SIZE OF BRAAI

Size the braai for the number of people you typically cater for plus two. With a gas braai if you have more guests you just keep cooking. If your wood/charcoal braai has an ember maker, you can keep producing hot coals whilst you cook, to enable you to keep cooking till all guests are catered for.

BRAAI LOCATION

Choosing the location of your braai will depend on your house layout. Ideally one wants to be able to braai in all weather conditions, not just when it is sunny and warm.

If you have a covered patio that is big enough to accommodate a decent seating area and a braai, that is the logical spot.

Remember braaing is not just about cooking but also social engagement with your guests. Your braai will produce smoke, that if installed under cover will need to be extracted through a chimney or rear wall.

GAS OR WOOD FIRED?

When cooking on a gas braai you light the unit, leave to warm up for about 10 minutes and then start cooking. Getting wood or charcoal hot enough to cook over is typically a 40 - 60 minute task. Decide on your lifestyle. If you have the time to light a fire every time you want to braai, buy a wood/charcoal braai.

If you have a busy lifestyle, rather buy a gas braai that you can use frequently.

If you want the benefits of cooking on both wood and gas, then buy a combo braai, but be aware that Combo Braais are bigger to accommodate both cooking options.

RAIN PROTECTION

If there is nowhere under cover to locate the braai, then a braai designed to handle being outside in the rain is the logical choice. Most mobile braais are made in stainless steel or are coated in a rust resistant coating to handle being outdoors. If you are building a brick structure with a Built In Braai, either upgrade the steel the braai is made of, or on a mild steel braai over paint the heat resistant paint the braai comes with, on the sections exposed to rain, in a good quality enamel paint.

CHOICE OF STEEL

Where you live will determine the type of steel your braai should be made of, for durability and to remain looking good.

LOCATION	BUY
By the sea, even if under cover	316 St St
1 km away from the sea, even if under cover	304 St St or better
Braai exposed to the elements away from the sea	3Cr12, 304 St St or better
Braai on a covered patio in a dry climate	Mild steel or better

On our Built in Braais we offer the client the choice of:

- Mild steel firebox, frame, door and inners all painted in black heat resistant paint
- Mild Steel firebox and inners painted in black heat resistant paint with a 304 St St frame and door
- 3Cr12 firebox, frame, door and inners supplied either unpainted or painted in black heat resistant paint
- 3Cr12 firebox and inners supplied either unpainted or painted in black heat resistant paint with a 304 St St frame and door
- Firebox, frame, door and inners all made in either 304 or 316 St St
